1. Lähtötiedot ja menetelmät

Tässä raportissa esitetään Kattiharjun tuulivoimapuiston laajennuksen välkemallinnus. Välkemallinnus on tehty WindPRO:n SHADOW-moduulilla ja laskennassa on käytetty WindPRO versiota 3.6.361. Puiston korkeustiedot perustuvat Luonnonvarakeskuksen (Luke) vuoden 2021 tietoihin. Välkemallinnuksen on laatinut Prokon Wind Energy Finland Oy.

Kattiharjun tuulivoimapuiston laajennuksen välkemallinnus on laadittu käyttämällä teoreettista voimalatyyppiä Generic 200, jonka roottorin halkaisija on 200 m, voimalan napakorkeus 159 m ja kokonaiskorkeus 259 m.

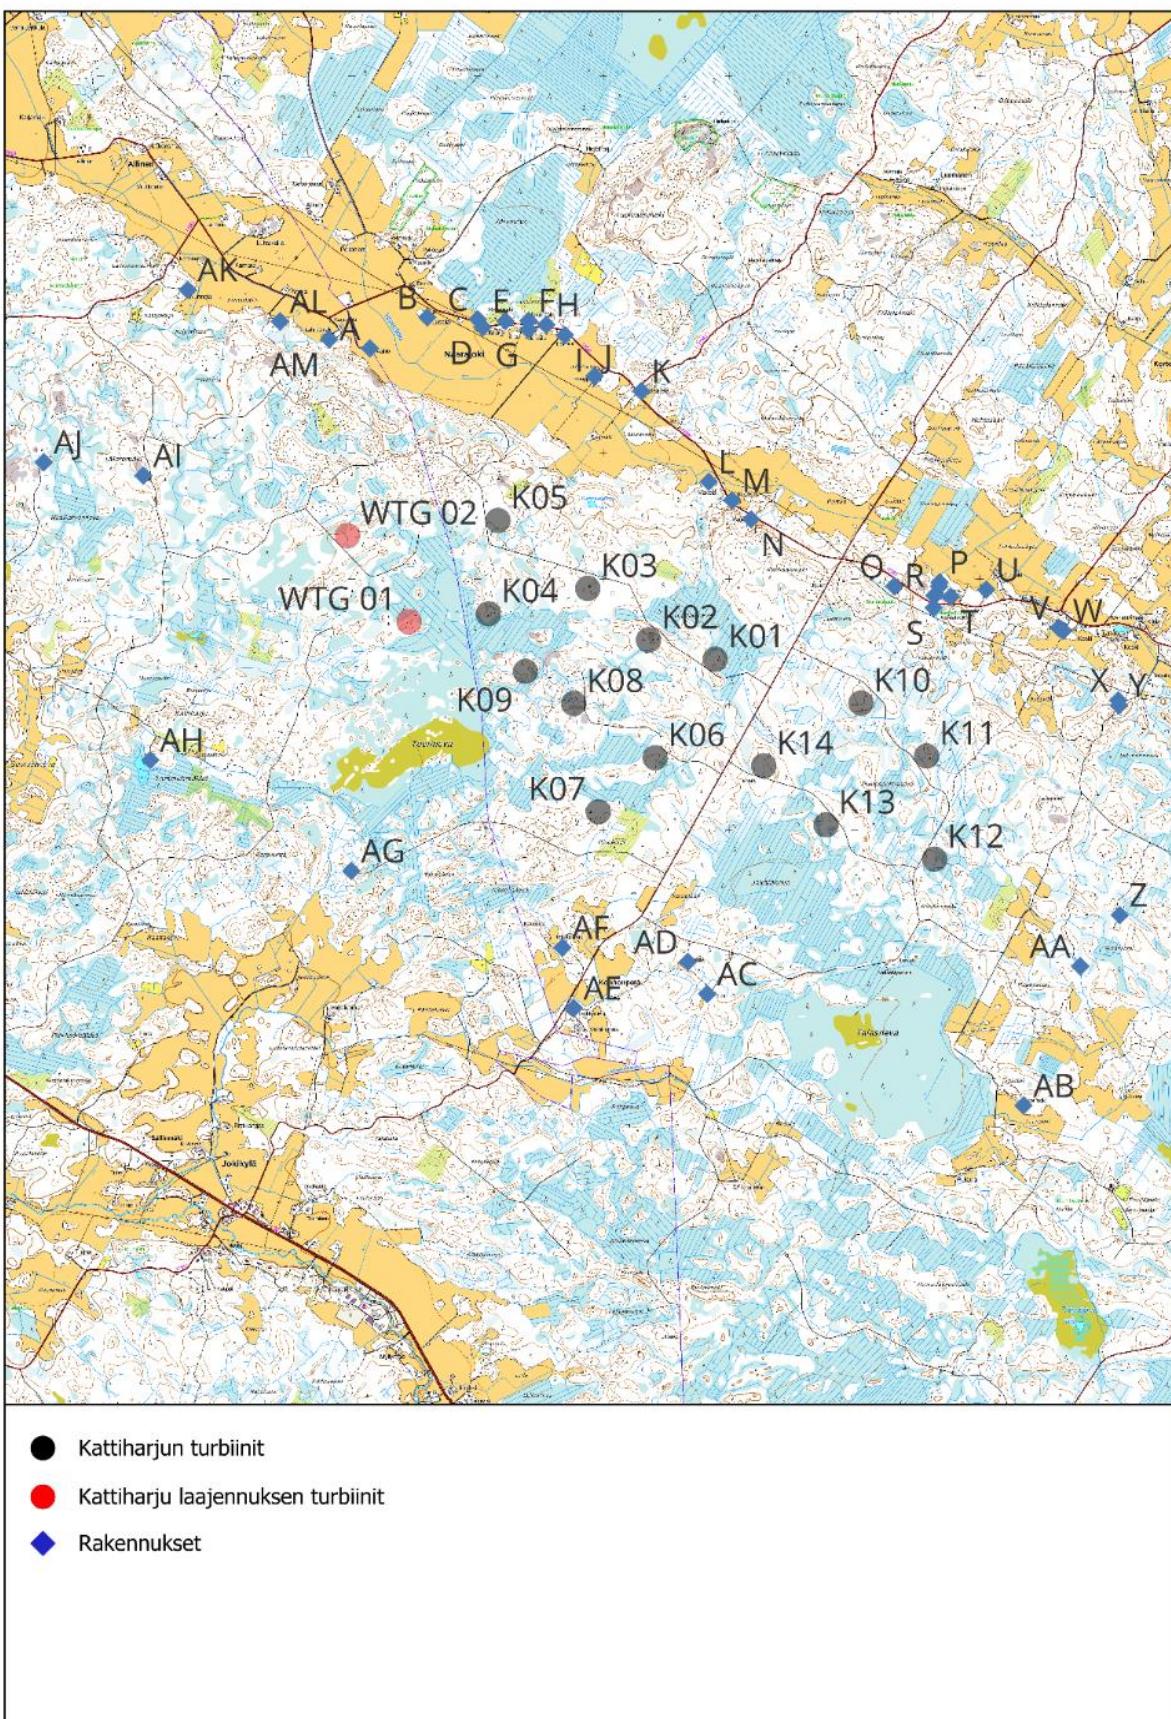

Mallinnuksissa on huomioitu Kattiharjun tuulivoimapuiston tuulivoimalat. Kattiharjun tuulivoimapuiston välkemallinnus on laadittu käyttämällä voimalatyypinä Nordex N163 6.X voimalaa, jonka roottorin halkaisija on 163 m. Voimalan numero 6 napakorkeus on 148,5 m, voimaloiden numero 2, 7 ja 8 napakorkeus on 149,5 m ja voimaloiden numero 1, 3, 4, 5, 9, 10, 11, 12, 13 ja 14 napakorkeus 150,5 m. Voimaloiden napakorkeus vaihtelee, koska osaan voimaloista suunnitellaan rakennettavan korotettu perustus. Voimaloiden kokonaiskorkeus on näin ollen 230-232 metriä.

Taulukossa 1 on esitetty välkemallinnuksessa käytettyjen voimaloiden perustiedot.

Taulukko 1. Välkemallinnuksessa käytettyjen voimaloiden perustiedot.

	Voimala malli	Voimaloiden lukumäärä (kpl)	Nimellisteho (MW)	Roottorin halkaisija (m)	Napa- korkeus (m)	Kokona- iskorkeus (m)
Kattiharjun laajennus	Generic 200	2	7,2	200	159	259
Kattiharju	N163	14	6,8	163	148,5- 150,5	230-232

Kuvassa 1 on esitetty Kattiharjun tuulivoimapuiston laajennuksen voimalat (WTG 01 ja WTG 02), Kattiharjun tuulivoimapuiston voimalat (K01-K14) ja lähellä olevien rakennusten (A-AM) sijainnit.

Kuva 1. Tuulivoimaloiden ja läheellä olevien rakennusten sijainnit

2. Välkemallinnuksen tulokset

2.1. Laskentatulos, ilman puustoa

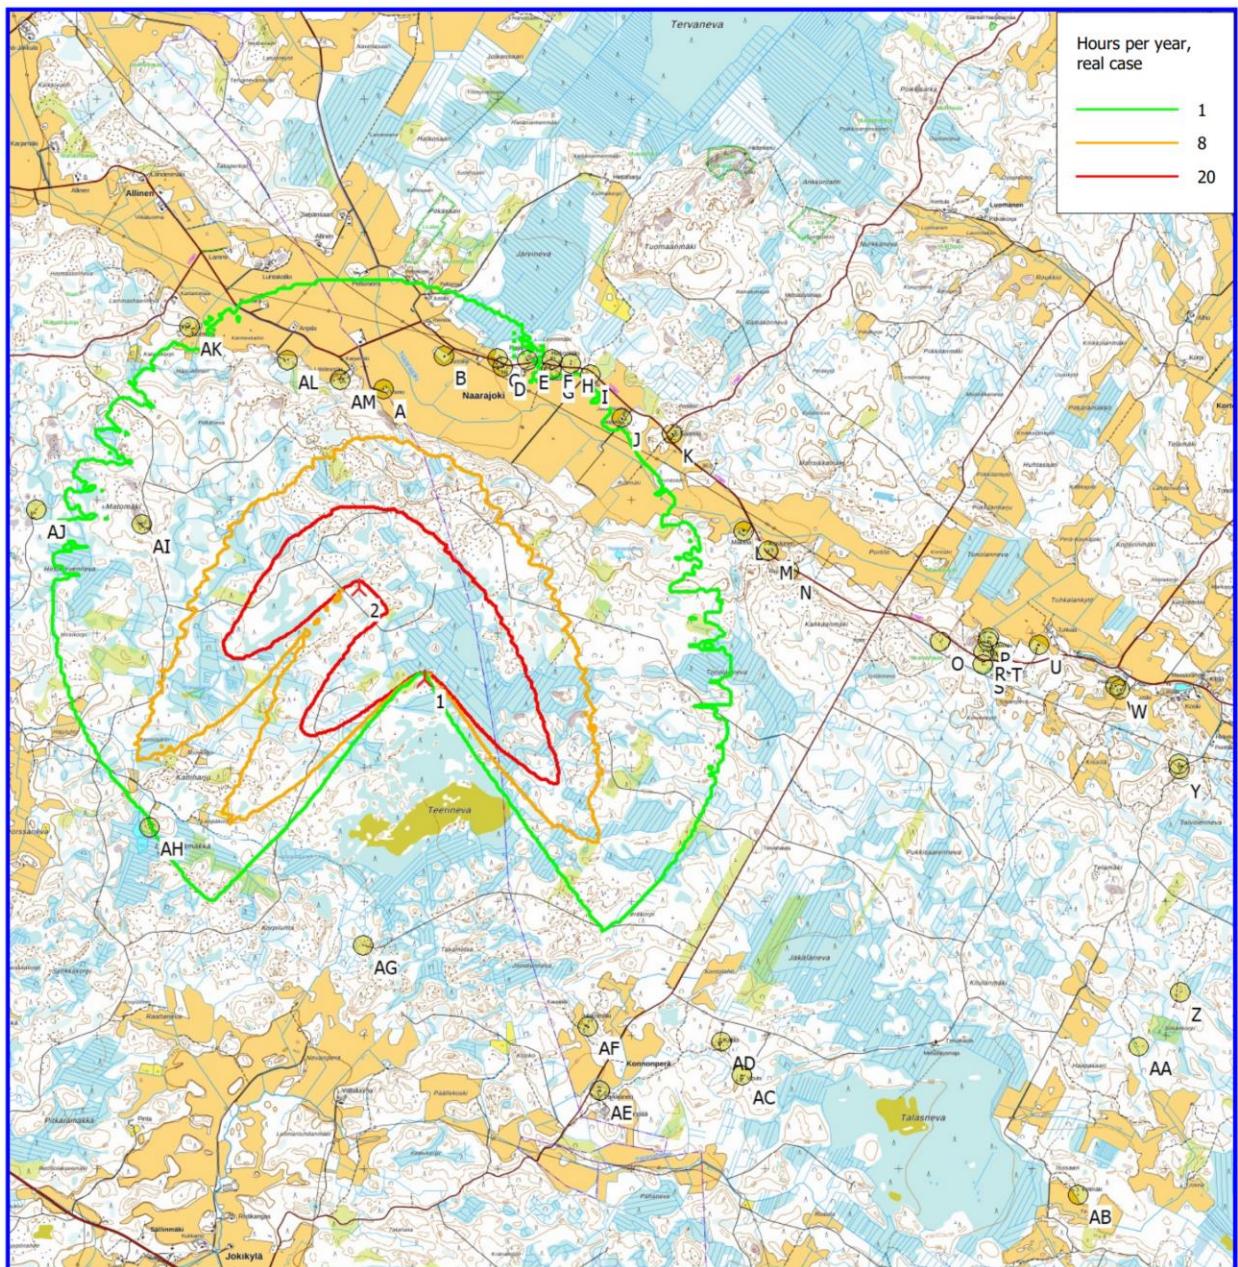

Rakennusten A-AM mallinnetut keskimääritiset vuosittaiset välketunnit Kattiharjun tuulivoimapuiston laajennukselle on esitetty taulukossa 2 (tuntia vuodessa) tilanteessa, jossa puiston suojaavaa vaikutusta ei ole huomioitu. Kuvassa 3 on esitetty Kattiharjun laajennuksen välkemallinnuksen tulos kartalla. Mallinnuksen perusteella yhdenkään rakennuksen pihapiirissä välke ei ylitä suositeltua arvoa 8 h/vuodessa.

Taulukossa 2 on lisäksi esitetty mallinnustulos Kattiharjun tuulivoimapuistolle sekä yhteismallinnus, jossa on huomioitu Kattiharjun tuulivoimapuisto ja tuulivoimapuiston laajennus. Kattiharjun tuulivoimapuiston mallinnustuloksen perusteella 7 rakennuksen (L, M, N, O, R, S, T) pihapiirissä välke ylittää 8 h/vuosi. Kattiharjun tuulivoimapuiston ja tuulivoimapuiston laajennuksen mallinnustuloksen perusteella 7 rakennuksen (L, M, N, O, R, S, T) pihapiirissä välke ylittää 8 h/vuosi. Kuvassa 4 on esitetty Kattiharjun tuulivoimapuiston välkemallinnuksen tulos kartalla ja kuvassa 5 on esitetty Kattiharjun tuulivoimapuiston ja tuulivoimapuiston laajennuksen välkemallinnuksen tulos kartalla.

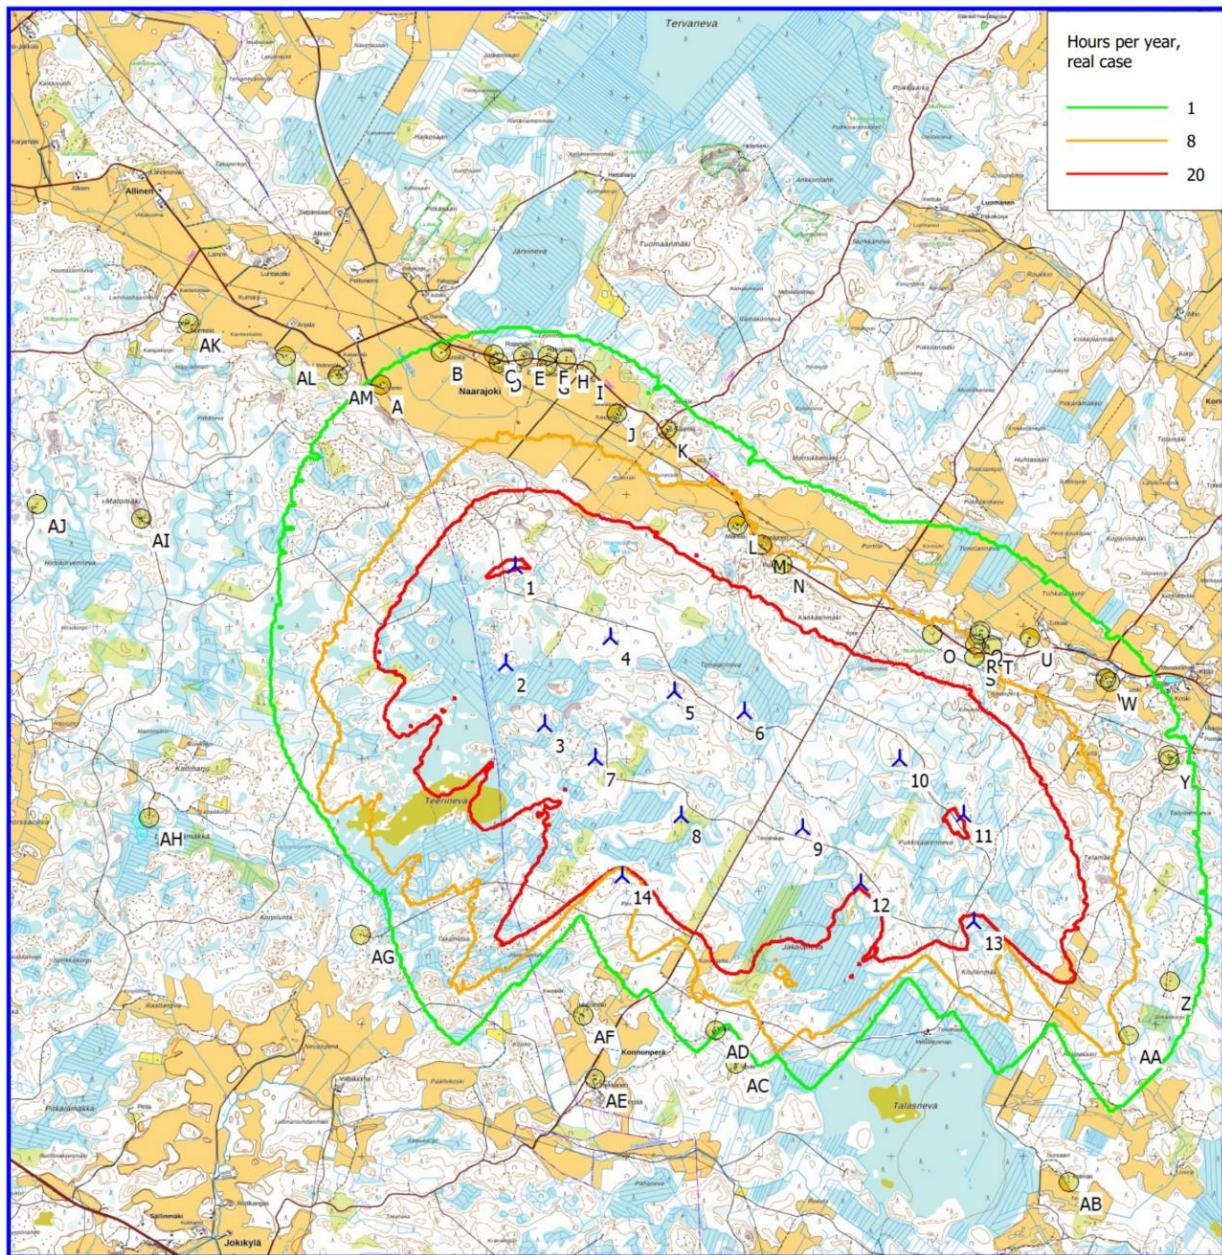

Taulukko 2. Keskimääritiset välketunnit vuodessa). Arvot, jotka ylittävät suositellun rajan (8 h vuodessa), on merkitty punaisella. Puiston suojaavaa vaikutusta ei ole huomioitu.

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE_20220502 Kattiharju extension
Receptor grid resolution: 1,0 m

All coordinates are in

SHADOW - Main Result

Calculation: 2 x Generic 200-159 rev04

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Expected [h/year]
WTG 01	Generic Generic 200-200 10000 200.0 !-! hub: 159,0 m (TOT: 259,0 m) (76)	19:22
WTG 01	Generic Generic 200-200 10000 200.0 !-! hub: 159,0 m (TOT: 259,0 m) (75)	1:56

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

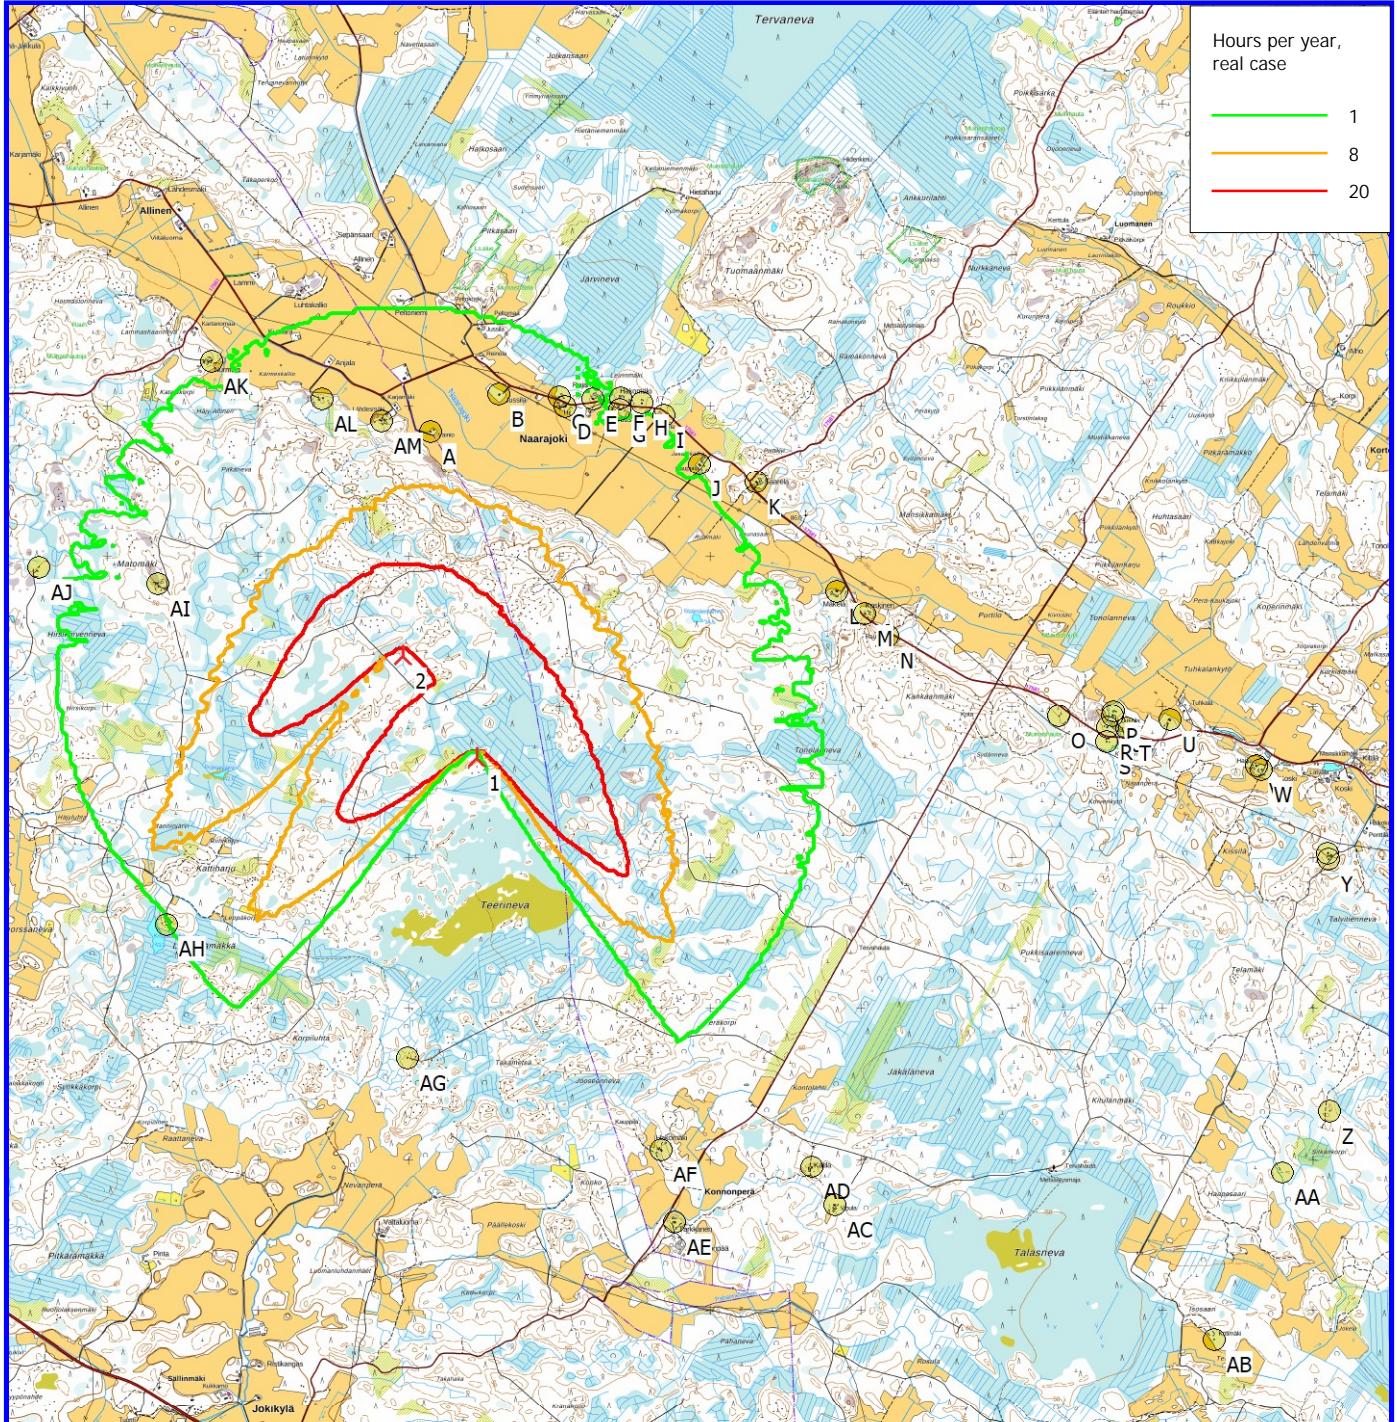

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

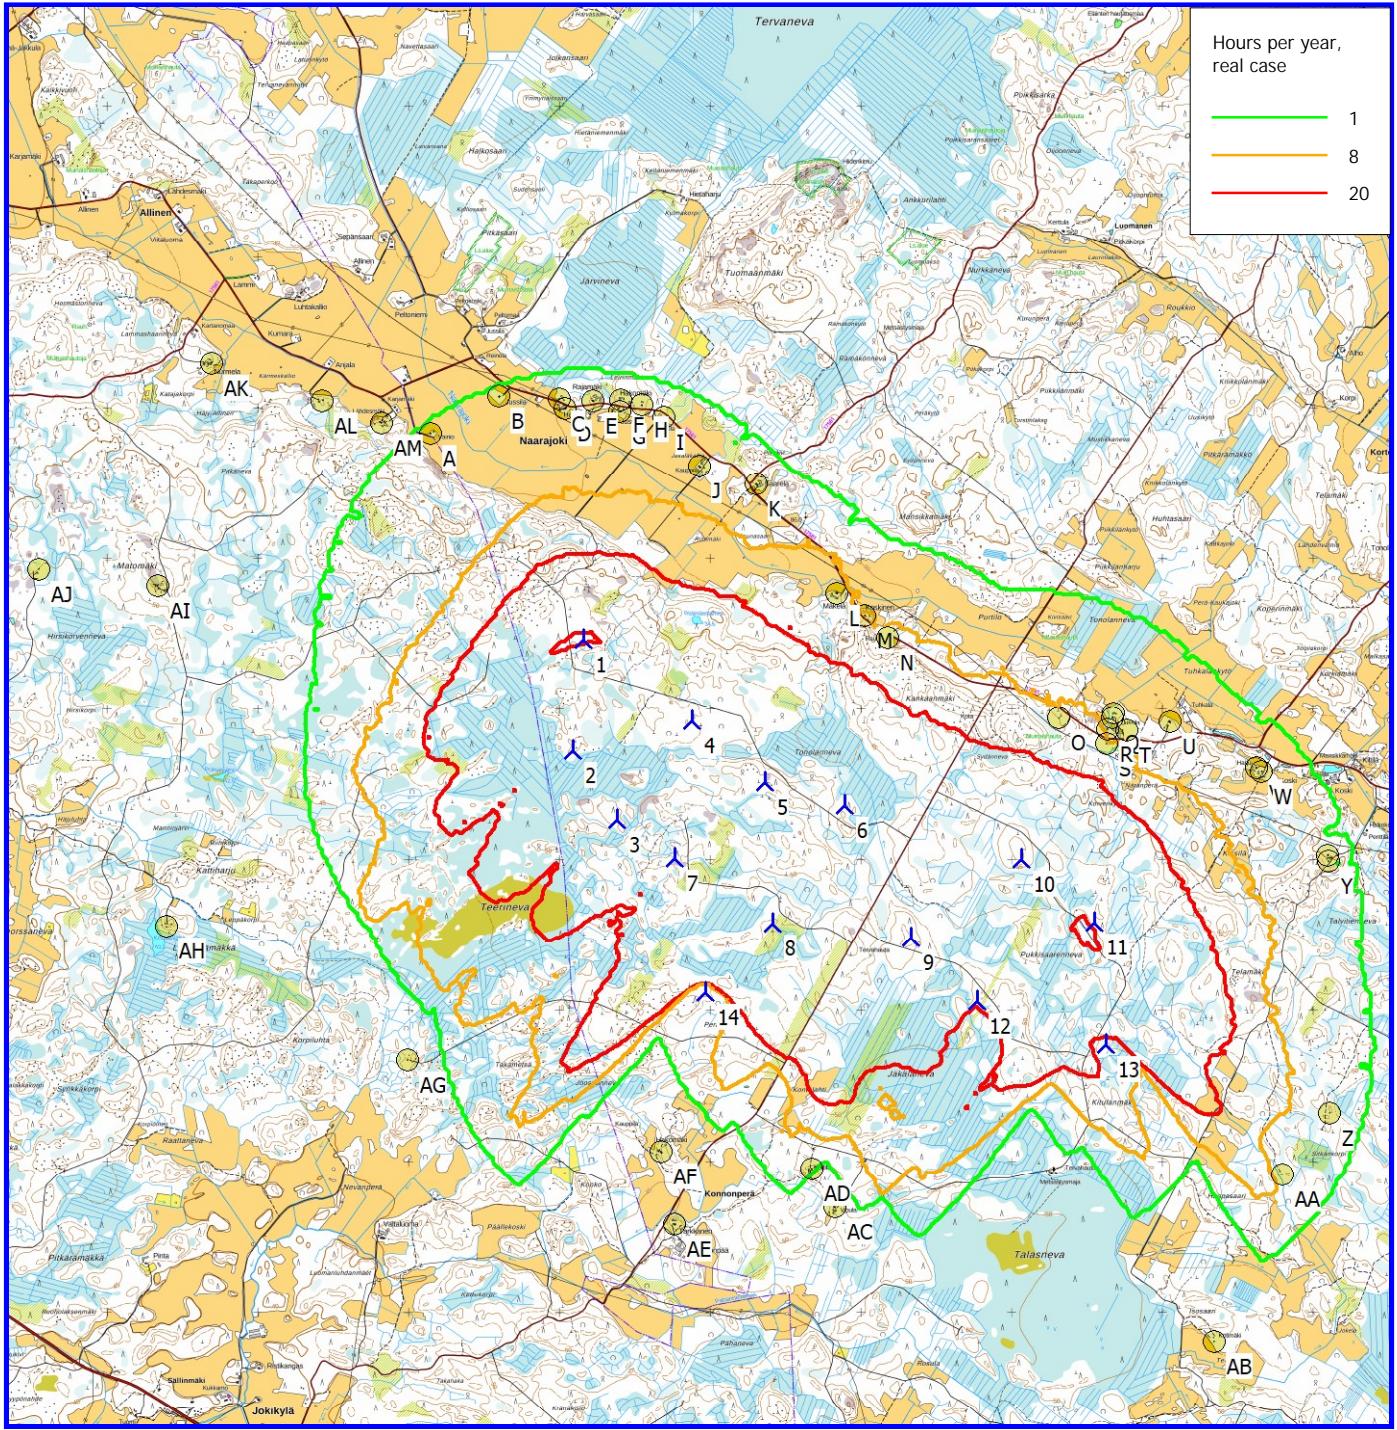

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

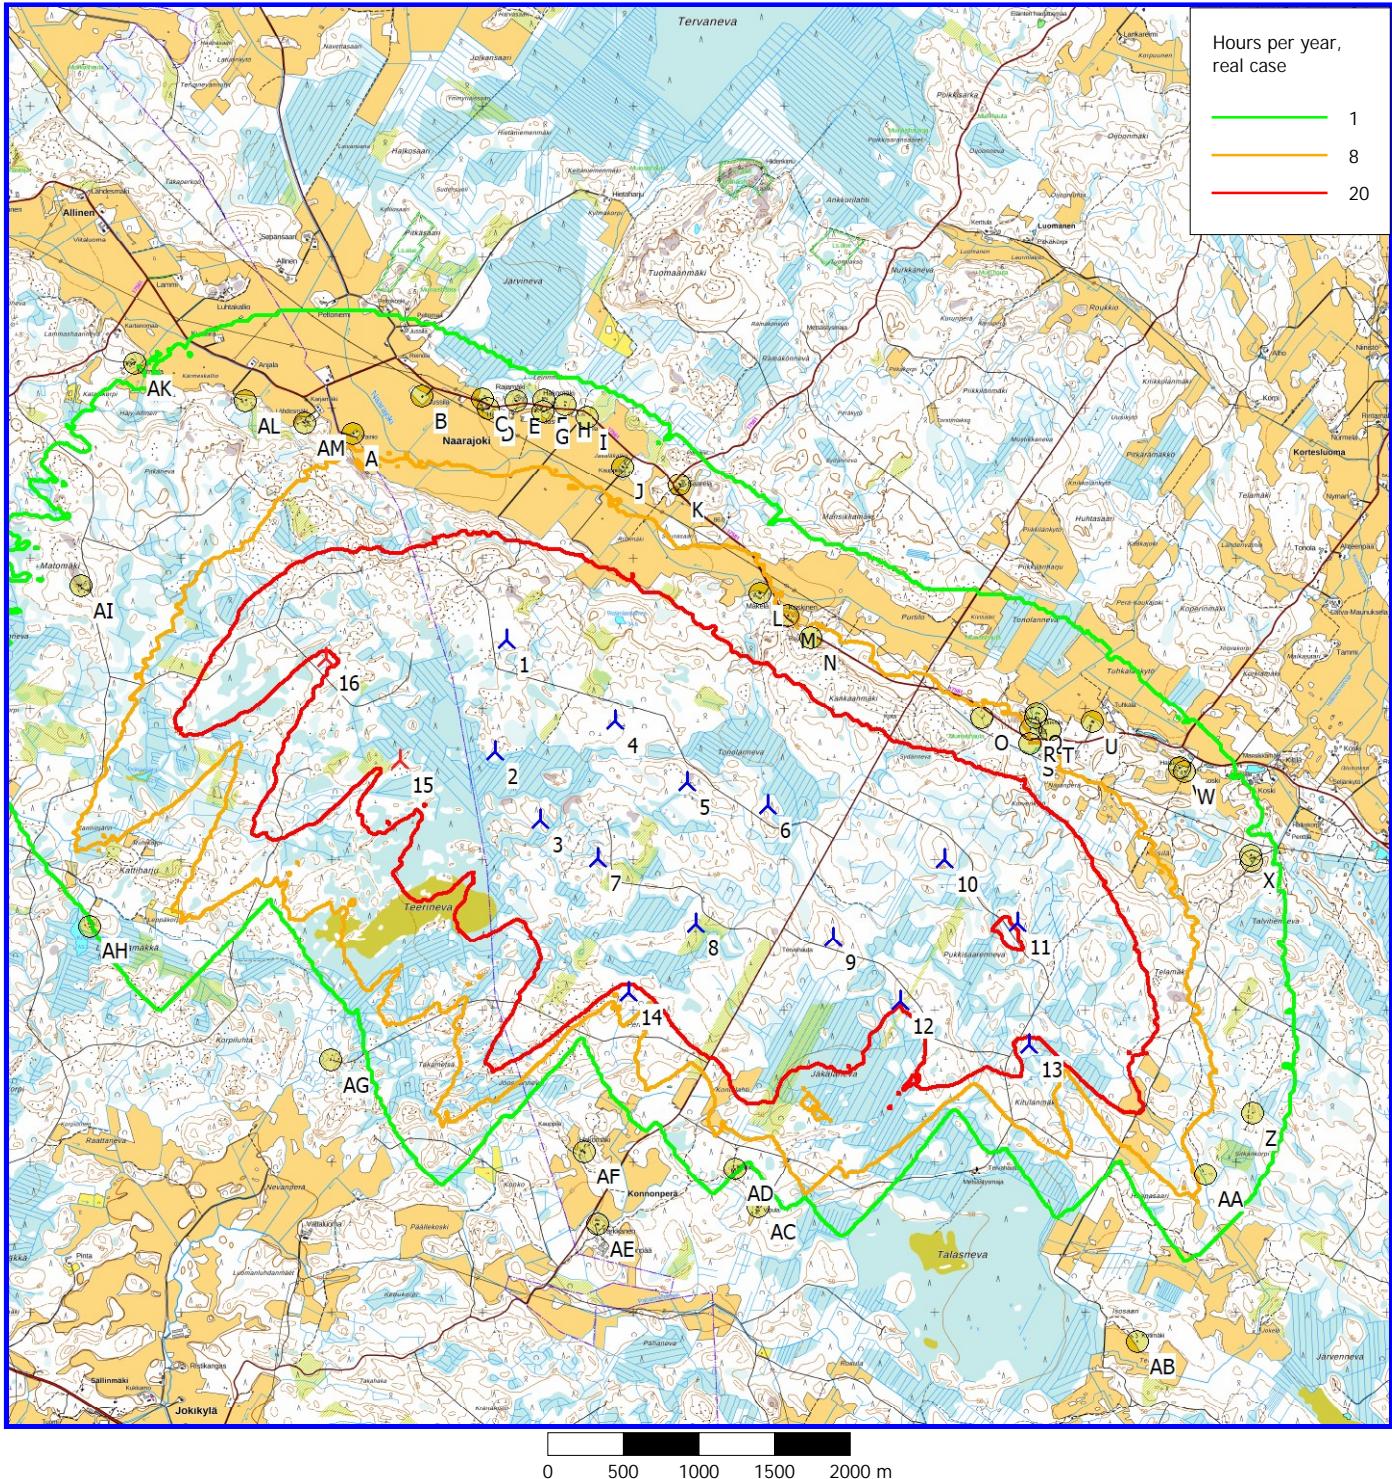

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Sunshine probability S (Average daily sunshine hours) []

Jan	Feb	Mar	Apr	May	Jun	Jul	Aug	Sep	Oct	Nov	Dec
1,00	2,82	4,23	6,60	8,77	9,10	8,87	6,81	4,67	2,52	1,17	0,58

Operational hours are calculated from WTGs in calculation and wind distribution:
EMD-WRF Europe+ (ERA5) [SAMPLE]_N62,897697_E022,215485 (29)

Operational time

N	NNE	ENE	E	ESE	SSE	S	SSW	WSW	W	WNW	NNW	Sum
667	307	312	351	501	982	940	1 370	1 108	781	544	495	8 359

Idle start wind speed: Cut in wind speed from power curve

A ZVI (Zones of Visual Influence) calculation is performed before flicker calculation so non visible WTG do not contribute to calculated flicker values. A WTG will be visible if it is visible from any part of the receiver window. The ZVI calculation is based on the following assumptions:

Height contours used: Height Contours: CONTOURLINE_20220502 Kattiharju extension

Area object(s) used in calculation:

Area object (Heights a.g.l. for e.g. Forest (ORA tool) or ZVI obstructions): REGIONS_2

Receptor grid resolution: 1,0 m

All coordinates are in

+49 4821 6855 100
Kristiina Isohella / k.isoheilla@prokon.net
Calculated:
30/01/2024 13.52/3.6.361

SHADOW - Main Result

Calculation: 2 x Generic 200-159 rev04 + Forest

Total amount of flickering on the shadow receptors caused by each WTG

No.	Name	Expected [h/year]
WTG 01	Generic 200-200 10000 200.0 !-! hub: 159,0 m (TOT: 259,0 m) (76)	14:56
WTG 01	Generic 200-200 10000 200.0 !-! hub: 159,0 m (TOT: 259,0 m) (75)	1:56

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

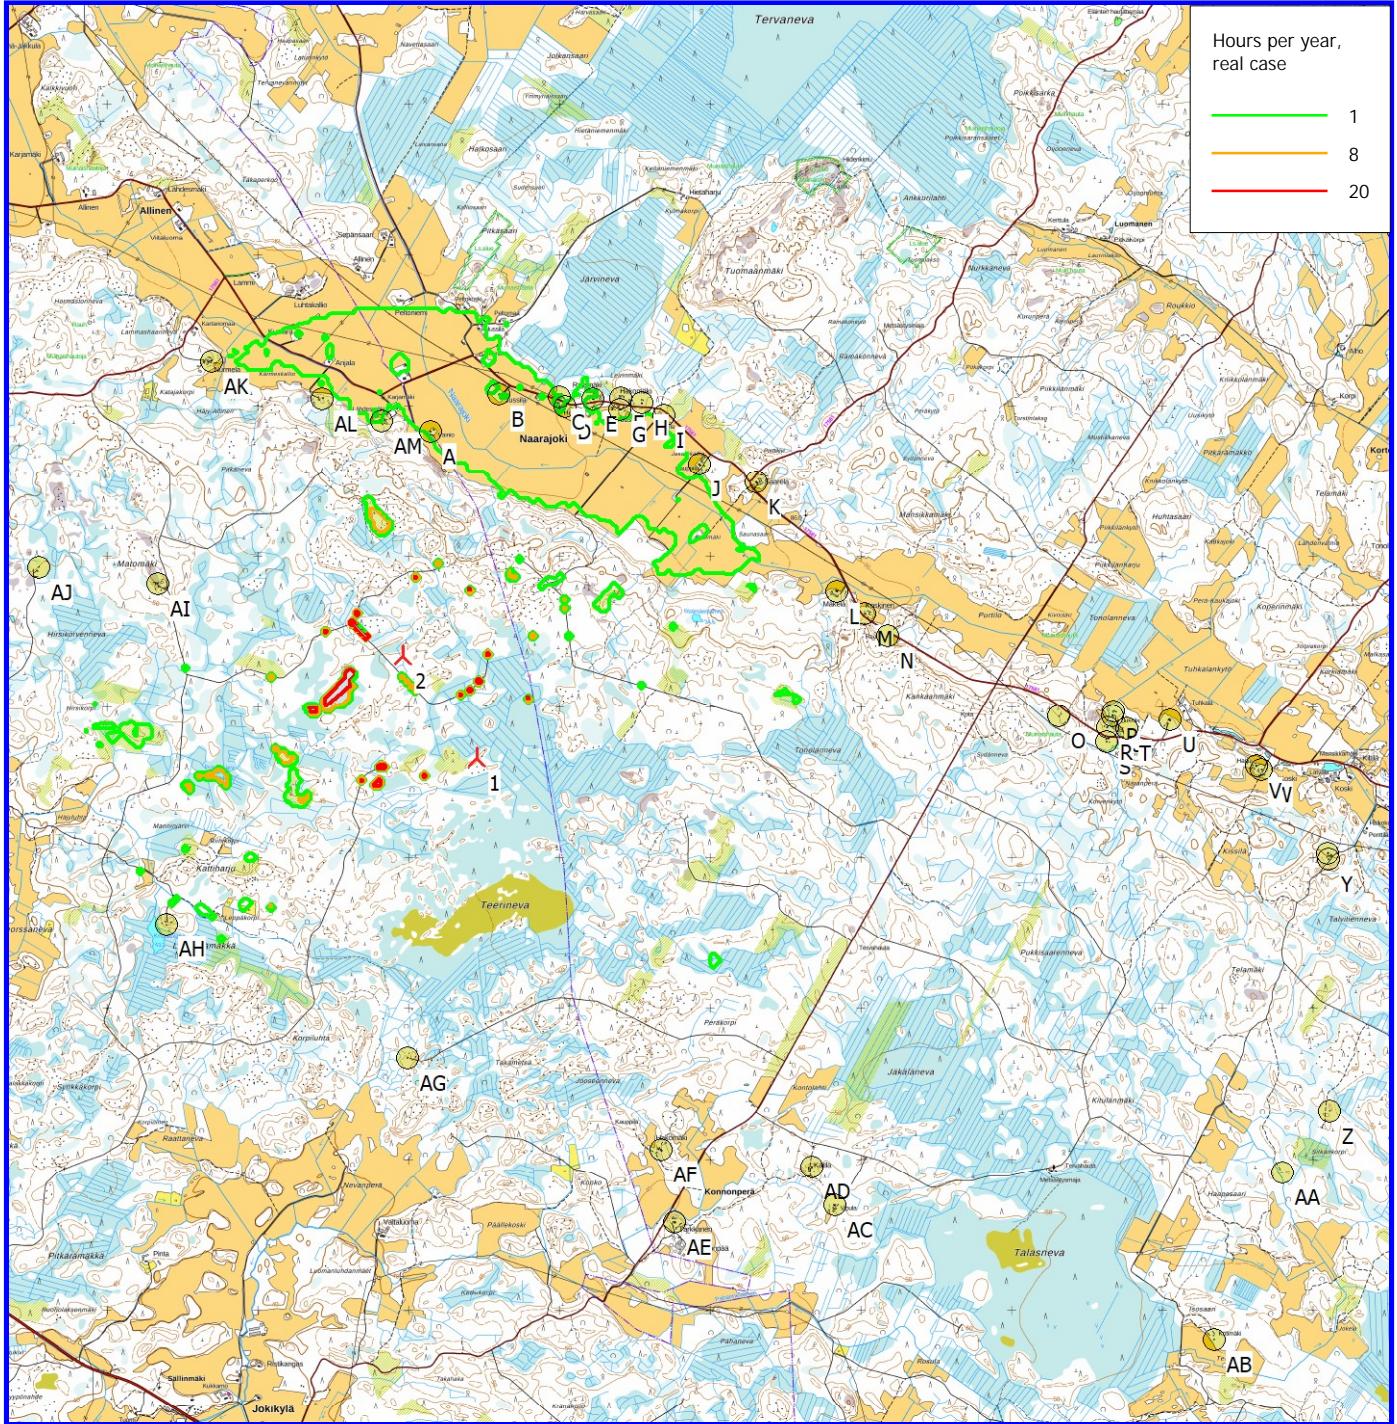

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.

Total times in Receptor wise and WTG wise tables can differ, as a WTG can lead to flicker at 2 or more receptors simultaneously and/or receptors may receive flicker from 2 or more WTGs simultaneously.

The calculation of the total expected values for a given receptor assumes a weighted average directional reduction for all WTGs contributing to shadow flicker within the same day. In the case where shadow flicker from different WTGs is not concurrent within the day, the total expected time at a given receptor may deviate marginally from the individual flicker time caused by each turbine separately.
